S & L models

Focus on the "flush-fitted" version, with technical glass door or technical solid door.
Do not use the lateral fillers, but use the 4 mounting brackets delivered with the wine cabinet.
You can also use the 4 mounting brackets for a "flush-fitted" installation , with the full glass door and the stainless steel glass door, instead of using the fillers.

S model :
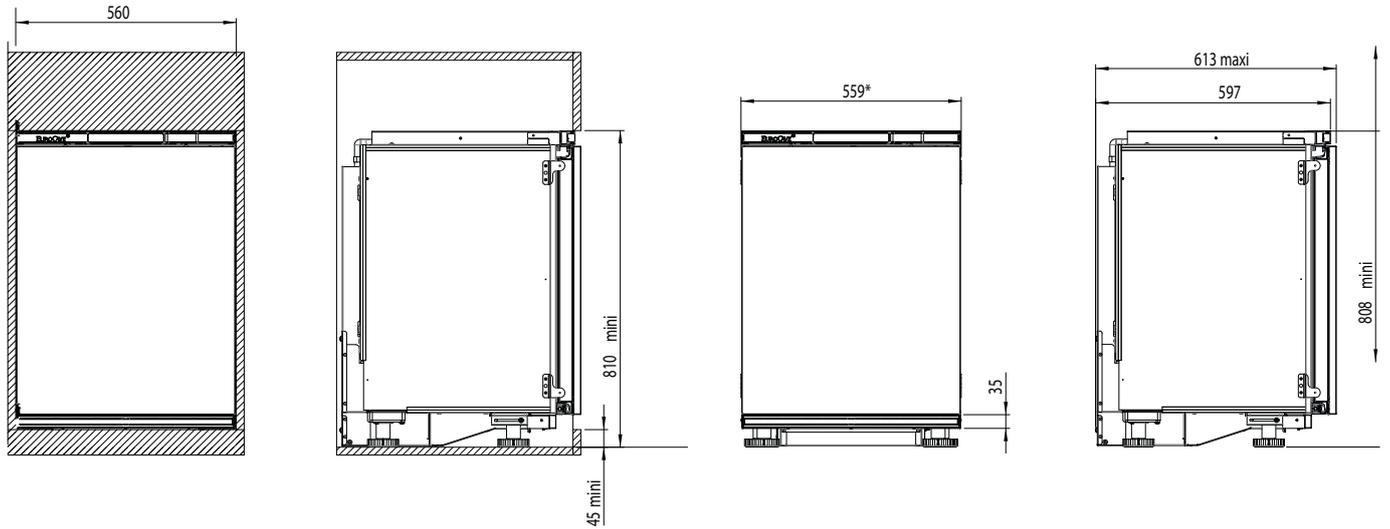

L model:

*Width including the 4 mounting brackets.

Installing two cabinets side by side

Please note: If installing two cabinets side by side, they must be placed in two separate kitchen unit casings. This allows adequate circulation of air around the cabinets, ensuring that they function correctly.

If the width of the two casings side by side is less than 1,200 mm, it is possible to install a single wall between the two cabinets.

In the case of a standard installation with two casings 600 mm wide, it is possible to install two walls between the two cabinets.

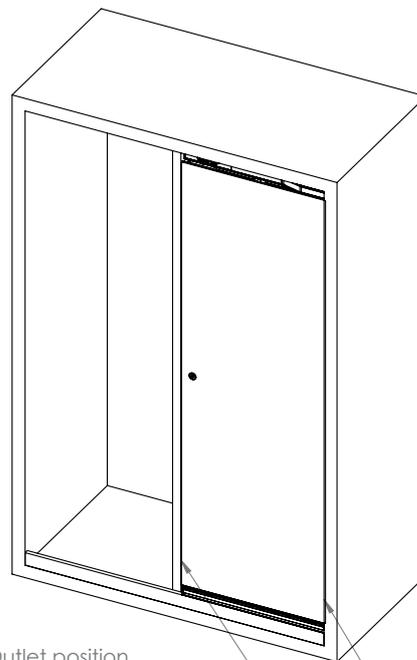

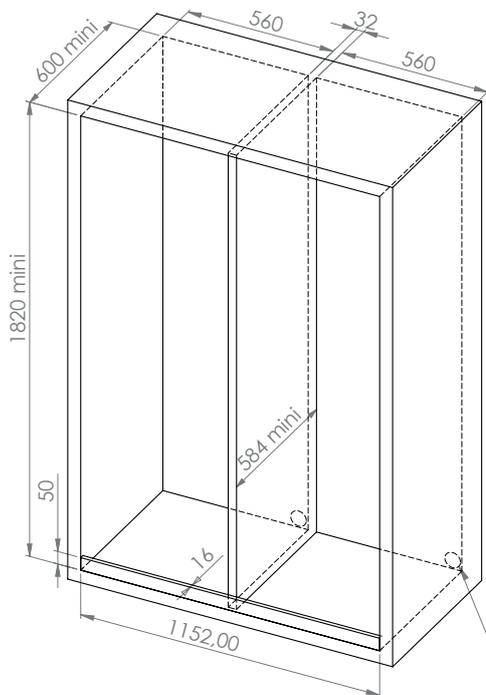

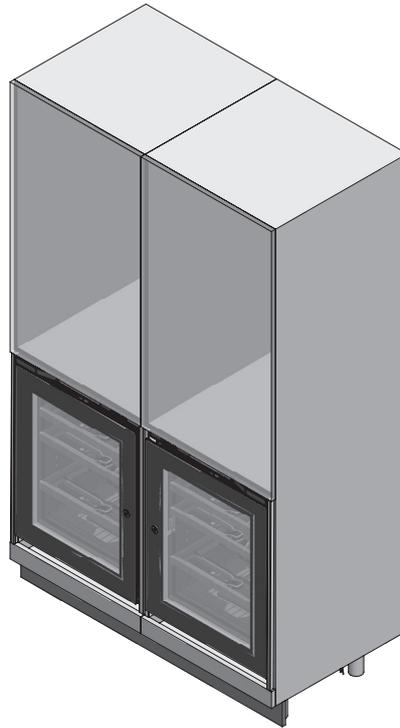

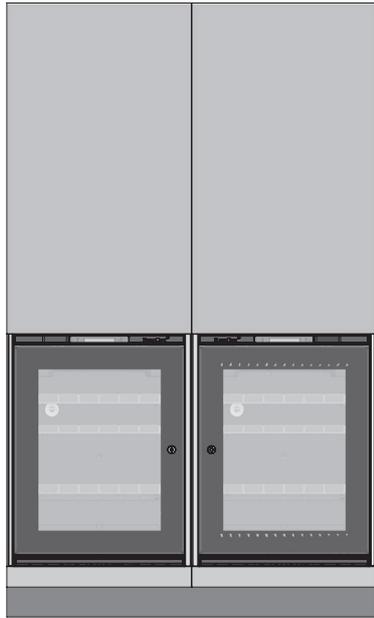

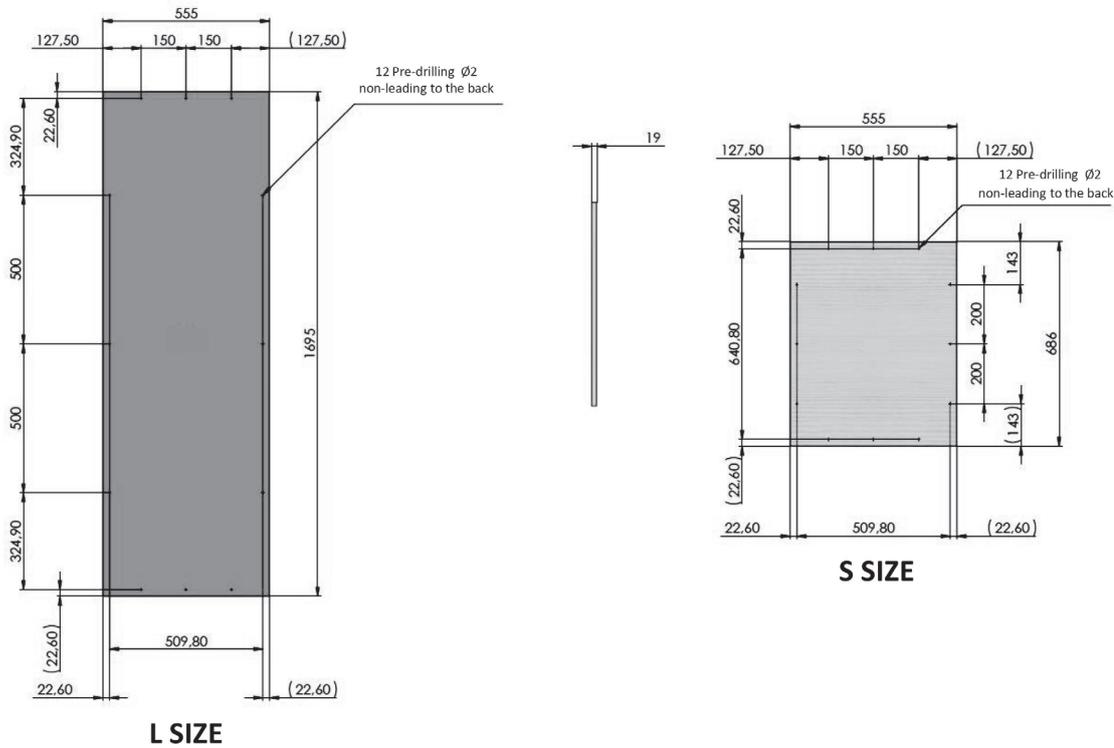

Outlet position
Length of
the power cord: 2m

Use the mounting brackets
on the hinge side

Use the mounting brackets or
the handle threader on the handle side.

NB: To guarantee the proper functioning of the wine cabinet, the top and bottom ventilation strips must not be covered in any way.
